

Dear Neil.

Please find attached pictures of my just finished Schloiderding. AUW 138 grms. I built it as “der floater!”.

The kit was a real joy to build, taking around 30 hrs in total to complete. I used clear Oralite, Bluebird BMS 101HV, Hyperlipo 2S 300mah, an Orange RX 410X and 4.5 grms nose weight.

I've included some detailed shots of the RC installation and linkage solutions. I imagine the photos will be useful for those building/considering buying this superb kit.

I'm happy if you wish to share the photos with other builders/ buyers, or on your new webpage. I will definitely buy another Schloiderding V2 to build, as “das Quirligste!”

Thanks to you Neil for supplying great quality planes/kits and superb customer service.

Kindest regards,
Mark.
